PROFESSIONAL SUMMARY

Final-year B.Tech CSE student at KIIT with hands-on experience building and deploying end-to-end ML applications — including a weather forecasting system achieving 1.0°C MAE and an NLP powered resume analyzer. Skilled in Python, Scikit-learn, TensorFlow, and SQL, with practical exposure to EDA, feature engineering, and predictive modeling through internships and self-driven projects. Actively seeking a Data Science or ML role where I can turn raw data into actionable insights.

TECHNICAL SKILLS

- **Programming**: Python, SQL, Java
- **ML/DS**: Machine Learning, Deep Learning, NLP, Statistics, EDA, Predictive Modeling, Feature Engineering
- **Libraries**: Pandas, NumPy, Scikit-learn, TensorFlow, Matplotlib, Seaborn
- **Other**: Excel, Power BI, API Integration

EDUCATION

Kalinga Institute of Industrial Technology, Bhubaneshwar | **2022-26**
B.Tech in Computer Science & Engineering
DAV Public School, Patna | **2020-21**
Higher Secondary Certificate
South Point Public School, Patna | **2018-19**
Secondary School Certificate

EXPERIENCE

KM Infra, Product Manager (Internship) | Gujarat | July 2025 to Oct 2025

- Applied data analysis on user feedback in Excel to prioritize features, directly influencing sprint planning decisions
- Conducted market research and competitor analysis, synthesizing structured data insights to guide product roadmap strategy
- Collaborated with cross-functional teams in Agile sprints, translating data findings into actionable product requirements for developers

AI – ML Virtual Internship, AICTE-Eduskills | Remote | Jan 2025 to Mar 2025

- Built and evaluated ML models (regression, classification) using Python and Scikit-learn
- Performed EDA, data cleaning, and feature engineering on real datasets
- Compared model performance using accuracy, precision, and recall metrics

PROJECTS

Weather Forecasting Web Application (API + Model Training)

- Achieved Mean Absolute Error (MAE) of 1.0°C on a test data set of 1000+ records.
- Integrated OpenWeatherMap API; built backend in Django, frontend in HTML/CSS/JS/Bootstrap
- Designed real-time interactive dashboard for forecast visualization

Inventory Management Dashboard (Python + Streamlit)

- Built interactive Streamlit dashboard processing 1000+ records for stock monitoring
- Automated stock classification (In Stock/Low Stock/Out of Stock) and best-seller identification via quantile analysis
- Created dynamic visualizations (bar/pie charts) with Matplotlib and Seaborn

AI Resume Analyzer (NLP + Web Application)

- Extracted text from PDF resumes using NLP techniques.
- Matched resumes against job descriptions using keyword similarity scoring.
- Generated ATS compatibility scores and skill-gap analysis.
